Analytics and Engineering Leader

Data Management | Systems Architecture | Data Strategy

SUMMARY

A results-oriented Analytics and Engineering leader with 30 years of progressive experience ranging from Strategic Data Architecture through Data Analytics and Software development across the Insurance, Financial Services, Healthcare, and Consulting sectors. Driven to create meaningful outcomes, accomplish strategic objectives, and provide leadership and mentorship to aspiring team members.

PROFESSIONAL EXPERIENCE

Analytics8, Raleigh, NC

March 2022 to August 2023

[Analytics8](#) specializes in data and analytics solutions for clients in the healthcare, manufacturing, and retail sectors. Founded in 2003, the company employs 200 people and generates \$35m in annual revenue.

Client Partner - Strategic Accounts

Reporting to Managing Director of Customer Success, responsible for providing leadership for up to 18 data engineers across Strategic Accounts like Sonos, Roche Pharmaceuticals and Diagnostics, GBLI, Vici Collection, and Ergon Energy.

- With [Roche](#), doubled staffing from **4 data engineers to 8** generating \$1m annual revenue, focused on modeling data in AWS Redshift using DBT, implementing the Data Vault 2.0 methodology, and developing test automation.
 - The engagement started with creating data models in DBT, then through a series of meetings with engineering leadership at Roche, identified the opportunity to provide additional support across software testing and test automation, data governance, and technical end user training.
 - Provided leadership and mentorship to Analytics8's offshore teams, leading to the internal promotion of two highly capable Staff Engineers to a Senior Data Engineers who co-authored and presented a case study highlighting our work with a Roche Engineering Executive at the 2023 Snowflake Conference.
- With [Sonos](#), grew the contract from **\$1m annual to \$3m over three years** after a major reorg, providing data engineering support for a legacy transformation from an on-prem SQL Server data warehouse to Snowflake cloud.
 - With KNB as the prime contractor, collaborated with a range of stakeholders to establish a clear and actionable legacy transformation and staffing strategy, securing a 2-year contract extension.
- With [GBLI](#), a specialty insurance provider, **led a 6-person team** through designing an enterprise data strategy and a legacy tech stack transformation plan designed to improve reporting efficiency across the enterprise.
 - Conducted a series of interviews across the Operations, Actuarial, Marketing, Finance, and Claims teams to develop technical requirements, use cases and implementation plan.
 - Partnered with the Chief Data Officer and the Director of Data Engineering to develop the transformation strategy from their legacy on-prem mainframe Data Warehouse over to Microsoft Azure.

UnitedHealth Group, Raleigh, NC

November 2021 to March 2022

[UnitedHealth Group Incorporated](#) (NYSE: UNH) is a multinational health insurance and services company that serves 53 million members and employs 400,000 people. In 2023, UnitedHealth Group generated \$324.2 billion in revenue.

Senior Data Analytics Consultant

Reporting to Director of Data Analytics within the Asynchronous Communications IT team, responsible for analyzing and reporting on call center performance and customer experience data pulled from LivePerson, Genesys, and Verint.

- Performed data exploration and analysis of customer service interactions using SQL, Excel, Spark, and DBeaver in a MapR Hadoop environment.
 - Presented findings and recommendations to the Data Analytics Leadership Team focused on improving customer experience as well as call center messaging performance.
- Assessed a series of production python and SQL scripts that had been pulling data from across the enterprise data warehouse without a clear methodology, data lineage, or data governance standard.

[Lenovo Group Limited](#) is a multinational technology company that specializes in consumer electronics, personal computers, and related services. Lenovo employs 77,000 people and generated \$62 billion in revenue in 2023.

Manager - Customer Experience and VoC Operations

Reporting to the Director of Customer Experience with two CX Analysts as direct reports, responsible for leading customer experience governance (CX) and voice-of-the-customer (VoC) operations across US, LATAM, EMEA and APAC.

- Directed the implementation of [ConfirmIt](#) for global Enterprise Feedback Management.
 - **Implemented Lenovo's VoC governance policies and oversaw the translation of NPS surveys into 11 languages across 46 countries, enabling consistent CX benchmarking across all regions.**
 - Identified a high email bounce rate in specific countries and partnered with ConfirmIt's email distribution team to resolve a series of spam flagging and regional language filtering issues.
 - Partnered with ConfirmIt's training and customer success teams to maximize the utilization of 1800 hours of prepaid platform training and platform support services.
- **Served as global lead over Lenovo's B2B customer experience program spanning 33 countries and 8 languages.**
 - Led the development of customized reporting dashboards based on CX and VOC survey data.
 - Oversaw and supported a dozen CX practitioners across Brazil, LATAM, US, EMEA and APAC.

State Farm Insurance Company, Bloomington, IL

1998 to 2020

[State Farm](#) is a mutual insurance company offering banking and financial services. State Farm employs 58,000 people and in 2019 generated \$79.4 billion in annual revenue.

Lead Data Analyst - Speech and Text Analytics

2019 to 2020

Reporting to the Manager of IT, supporting the Call Center Speech and Text Analytics team, responsible for automating data feeds and text classification reporting, improving chatbot performance, and improving analytical model accuracy.

- Identified a breakdown in the quality and accuracy of support chatbot responses, where the chatbot was conflating questions directly related to individual clients with FAQ style questions, generating unsatisfactory responses.
 - Designed and implemented a text classification model utilizing [Megaputer PolyAnalyst](#) to analyze customer interactions across the chatbots, live chats, and customer surveys.
 - Analyzed the raw JSON files pulled from Hadoop, architected improved chatbot prompts and instructions, then oversaw the offshore development team through the implementation of the required updates.
 - **Achieved a 50% accuracy improvement each month, for three consecutive months, resulting in substantial improvements in customer satisfactions rates.**
- Led the automation of data feeds using Splunk, focusing on efficient data collection and processing then developed and implemented text classification systems for analyzing incidents reported in HP Service Manager.

Data Architect - State Farm Bank

2018 to 2019

Reporting to the Manager of IT for State Farm Bank, responsible for modernizing the data and analytics platforms used for anti-money laundering (AML), fraud detection, and regulatory reporting compliance.

- Led the implementation of [NICE Actimize](#), an AML application, overseeing data integration between the FIS core banking systems and Actimize. Organized requirements sessions and facilitated data mapping across the platform.
- **Reconfigured State Farm's SAS based Fair Credit Reporting Act (FCRA) reporting process** by developing a pipeline to consolidate mainframe data into Hadoop. Used Spark and Scala to transform the data and made it available for reporting through Hive, reducing manual data entry and report configuration while improving reporting accuracy.

Data Architect - Property and Casualty Insurance Claims

2017 to 2018

Reporting to the Manager of Claims IT, responsible for leading data architecture design, data mapping, data validation, and SQL code review projects within State Farm's Property and Casualty Claims division.

- Led the design of a Robotic Process Automation (RPA) solution used by Claim Associates to automate manual data entry and data migration tasks across State Farm's claims management applications.
 - **This RPA solution saved State Farm's Claim Handling team \$3m in labor costs annually.**
- Maintained the systems and data architecture for a SAS based Fraud Detection model that flagged potentially fraudulent claims based on text analysis and actuarial rules model.
 - Gathered business requirements then drafted technical stories to guide the data architecture and systems implementation process. Oversaw integration and user acceptance testing.
 - **Post implementation, the SAS Fraud Detection Framework reduced P&C fraud exposure by \$5m per year.**
